

Lab 7 – CSE 101 (Spring 2020)

Objectives

The primary objectives of this lab assignment is:

- To get practice writing recursive functions

1. Writing Recursive Functions (5 points)

Download [lab7.py](#). Write the implementation for each function defined in the file in a recursive manner (i.e. the function must call itself) – it is not acceptable to submit an iterative solution to these problems.

Work on these functions one at a time, uncommenting the function and the resulting test code further down in the file. You will need to move the triple quotes (""") line after each function to uncomment it.

Submission

Submit the completed `lab7.py` program on Blackboard.
